Caution Bulletin 10/97: Pre-dive Inspections
11/5 October, 1997

Subject:
Pre-dive Equipment Inspections
Products Affected:
Kirby Morgan SuperLite
Helmets & Bandmasks

The purpose of this Caution Bulletin is to remind all end users and owners of any Diving Systems International Kirby Morgan Deep Sea Diving Equipment that the **pre-dive inspection and check of all working components is extremely important.**

Before *every* dive, this life-support equipment should be completely checked for any damage or wear. Even normal wear & aging will eventually result in the need to replace parts. Any abnormal condition of any component requires the removal and replacement of the component. All mechanical components should function smoothly.

If any part doesn't look right, don't use it.

Docu# 971015001

All metal parts should be inspected for cracks or corrosion and replaced immediately if this type of damage is found. While some surface rust or corrosion is to be expected, severe corrosion can lead to the eventual failure of the part.

Cracks or heavy wear of the fiberglass shell should be repaired **ONLY BY AN AUTHORIZED DSI CERTIFIED REPAIR FACILITY!** Any fiberglass work done by a non authorized facility voids any warranty by DSI and could even result in the catastrophic failure of the part. This could result in injury or death to the diver.

Caution - Warning

Use only Diving Systems International Kirby Morgan original replacement parts. The use of other manufacturer's parts will interfere with the performance characteristics of your life support equipment and may jeopardize your safety. Additionally, any substitutions will void any warranties offered by DSI. When ordering spares, always insist on **Kirby Morgan Genuine Parts.**

CAUTION!

Do not dive this mask in water containing concentrations of petroleum based chemicals. Clean the mask using only mild detergent and water. **Do not** use any type of chemical locking solvents on any of the fasteners on this mask. They can attack and severely damage the mask materials.

Attention: Mr. [REDACTED]

SUBJECT: MARES PROTON ICE TEFLON V32 CWD, ORBITER V12, ORBITER TEFLON V22 CWD, ORBITER V22, PROTON ICE V32, AND PROTON XL V32 SCUBA REGULATORS

I wish to thank you for allowing Navy Experimental Diving Unit (NEDU) to evaluate your Proton Ice Teflon V32 CWD, Orbiter Teflon V22 CWD, Orbiter V12, Orbiter V22, Proton Ice V32, and Proton XL V32 scuba regulators — six of the 20 models of open circuit regulators tested at the direction of Naval Sea Systems Command, Office of the Director of Ocean Engineering, Supervisor of Salvage and Diving (NAVSEA OOC), Washington, DC. NAVSEA OOC authorized testing of current, readily available scuba regulators to identify those that perform well in cold and freezing water so that they might be added to the "Authorized for Navy Use" (ANU) list. Using results from our testing, NAVSEA OOC will now determine which regulators best meet the Navy's requirements and will complete the formal process needed to put selected regulators on the ANU list.

Enclosed are copies of our technical reports: TR 04-04 (Unmanned Evaluation of the Mares Proton Ice Teflon V32 CWD Scuba Regulator), TR 04-17 (Unmanned Evaluation of the Mares Orbiter V12 Scuba Regulator), TR 04-18 (Unmanned Evaluation of the Mares Orbiter Teflon V22 CWD Scuba Regulator), TR 04-19 (Unmanned Evaluation of the Mares Orbiter V22 Scuba Regulator), TR 04-24 (Unmanned Evaluation of the Mares Proton Ice V32 Scuba Regulator), and TR 04-26 (Unmanned Evaluation of the Mares Proton XL V32 Scuba Regulator). These reports, describing your regulators' performance characteristics during unmanned testing, have also been provided to NAVSEA OOC, which will not necessarily select all candidate regulators as additions to the ANU list. Our results indicate that the Proton Ice Teflon V32 CWD is a candidate for ANU listing as a regulator suitable for use in water temperatures as low as 29 °F. The Orbiter Teflon V22 CWD, Orbiter V12, and Orbiter V22 are candidates for ANU listing as models suitable for use in water temperatures ≥ 38 °F. The Proton Ice V32 and XL V32 models are not ANU list candidates.

Again, I appreciate your cooperation in facilitating this testing and allowing us the opportunity to evaluate your products.

--
