

[-] Occupational Medicine

[-] Version 1.0

[-] Scope

Privilege(s)

Supported      Not Supported

- The scope of privileges in Occupational Medicine includes the evaluation, diagnosis, management and consultation of patients with acute/minor and chronic occupational/environmental illnesses and injuries of all organ systems. These providers perform pre-employment, periodic, return-to-work, pre-deployment, fitness to continue in current position, disability, retirement, surety, security clearance, and termination physical examinations. Providers design and perform medical surveillance and/or certification exams for patients with exposure risk and provide prevention planning for individuals and population groups with/at risk for occupational and environmental illness and injury.  Supported  Not Supported
- Providers perform, interpret and analyze epidemiological investigations, as well as request and review industrial hygiene exposure information, biological monitoring, and toxicological tests in order to develop recommendations for countermeasures to reduce occupational or environmental hazards and prevent adverse health outcomes. They perform determinations of causality in cases of possible occupational illness and injury; advise supervisors regarding reasonable accommodation of medical work restrictions and limitations; and provide consultative services in support of disaster response, acquisition, purchase, and risk communication. Occupational Medicine Physicians may assess, stabilize, and determine disposition of patients with emergent conditions.  Supported  Not Supported
